- Portfolio analysis, Microsoft Excel, R analysis, SPSS-24.0, SQL and Software development cycle.

### WORK EXPERIENCE

**Summer Internship (Oil India Limited-Noida Apr-June 2017)**

○

**Project title: Economic Analysis of an Oil Well Exploration and Production**

**Project Description:** The main objective of oil and gas operations is to find, extract, refine and sell the valuable energy sources, because of the risky nature of the business, involving huge investments and long leading time to find and extract the hydrocarbons development and production is taken up by joint ventures by sharing the capital cost and revenues as per the agreement contract between them thus before entering into an agreement a company aims to have a clear assessment of the project which involves economic analysis which is one post calculation of NPV, IRR, cash flows and oil estimation out of the asset.

**Senior System Engineer (Infosys Technologies Jan 2015 - June 2016)**

**Consultant with Royal Bank of Scotland**

○ **Project Description:**

The asset protection scheme was a part of a range of support that RBS Group received from the UK Government following the refinancing of the bank in 2008 and early 2009. The extent of state aid that RBS group received required the approval of European Commission, for which the group had to submit the restructuring plan that demonstrated that it could achieve long-term standalone strength without further support from UK govt. Thus, as per the solution RBS group will divest Rainbow Business by building an independent technical platform and business operations to support all divesting banking services creating a separate instance of RBS using the existing RBS Group Systems which will consist of separate code base data base along with a separate infrastructure.

This restructuring induced RBS to open a new bank W&G with some specific profit accounts of RBS being moved to W&G

- Client management – Interaction with multiple clients for various application needs. Setting client expectations, ensuring client engagement for various activities avoiding any application anomalies.
- Analyse Design and development of new modules of the application as per the business requirement, minimizing the risks of application crash.
- Detailing work-flow with regards to functionality and end user perspective

**System Engineer (Infosys Technologies Oct 2012 – Dec 2014)**

**Analyst with Fidelity Investments**

○ **Project Description:**

It was a Tax Accounting System (TAS) which involved migration and maintenance from oracle to DB2 including the migration of business logic from UNIX to Mainframes. Business objective was to help the customers of Fidelity Investments to track the impact of their investment as per the IRS cost basis regulation. The system was developed to give necessary information to the customers to complete their 1040 forms and to track investment performance for Brokerage Retirement account and to make informed, Tax conscious, investment decision. TAS maintains back end information of customer's account.

- Requirement gathering from the client, Requirement analysis, detailed functionality and business understanding, and delivering within Deadlines with Zero Error.
- Analysing clients existing system creating prototypes based on the information post analysis of the business logic involved, reducing any possibility of application crash or missing requirement.
- **With handy unit testing techniques helped saving 10,000USD for fidelity investments by automating the account file check process.**

#### **Leadership Role**

- College Placement Coordinator
- College Coordinator Tedx talks
- **College president Technical cum cultural fest (Graduation)**

#### **Honours and Awards**

- ❖ Was awarded with INFOSYS INSTA Award 2014(10/1000) for an exemplary player of the account.
- ❖ Ranked 28 in Creative shock an international case study competition
- ❖ Was awarded gold medal for scoring 97/100 in Mathematics in class 12.
